

IF YOU
think things get
ROUGH in the
MINES
you should see
where we've
been working.

There are lots of cables on the market that meet the industry's minimum requirements. The question is, does "good enough" for others mean it's good enough for you?

At Optical Cable, we are proud that we make the toughest cable in the world. It's what we do. Just ask the U.S. Department of Defense. Ours is the only cable in the world to currently carry the U.S. military's highest rating for ground tactical fiber optic cable.

You may never need a cable as tough as ours. But if you do, the time to find out is not when your system goes down. When communication to your equipment, monitors or rescue operation is compromised due to a cable failure, lesser cables quickly become quite expensive and can cause lost production or even lives.

For more than two decades, we've been manufacturing the broadest range of top-performing fiber optic cables for the world's toughest applications. Optical Cable Corporation — from the battlefield to the football field™ — for 25 years.
